

OFFICE MONITORS FROM EIZO

Economical for you,
sustainable for the environment

FlexScan office monitors from EIZO are known for their excellent image quality as well as their ergonomic features that are gentle on the back and eyes. These are attributes that are extremely important for a modern workplace. However, equally important is the impact of the IT infrastructure on the operational energy balance and the environment. These are aspects where EIZO office monitors have also excelled for years. They are equipped with sophisticated energy-saving features, produced in accordance with international environmental regulations, and conserve resources thanks to their long service life.

ALWAYS CONSCIOUS

- ◆ Environmentally and climate-friendly production, including measures to reduce waste, wastewater, and emissions
- ◆ Production free from child and forced labour
- ◆ No minerals sourced from critical or conflict regions
- ◆ Use of sustainable packaging materials, with a multi-pack option available for large-scale projects
- ◆ High proportion of recyclable materials in housing plastics
- ◆ High energy efficiency, with additional features for further energy savings
- ◆ Compliance with international energy-saving guidelines such as ENERGY STAR, EPEAT, and TCO
- ◆ Exceptional durability due to the use of first-class materials and meticulous craftsmanship
- ◆ 5-year warranty, including on-site replacement service

Working with the Best

ENVIRONMENTALLY FRIENDLY USE OF MATERIALS

EIZO FlexScan monitors include models made from more than 90% recycled plastic. This reduces the amount of plastic waste released into the environment, conserves resources, and promotes material reuse.

SUSTAINABLE PACKAGING

EIZO is progressively shifting away from plastic and polystyrene for packaging its monitors to diminish environmental impact. Instead, the company is opting for cellulose derived from recycled cardboard and newsprint. Cables enclosed are wrapped in paper rather than plastic bags. Additionally, projects have the option to select an alternative packaging format featuring four monitors and four separate stands, each in its own shipping unit, further reducing transport volumes and packaging waste.

LONGEVITY AND REPAIRABILITY

EIZO monitors are engineered for a lengthy service life, often extending well beyond the five-year warranty applicable to all office monitors. Spare parts remain available for up to five years after the cessation of production. The entire utilization cycle considers environmental impact, with longevity and repairability safeguarding resources and the climate.

CERTIFIED ENVIRONMENTAL MANAGEMENT SYSTEMS

We produce in our own factory, which has ISO 14001 and ISO 50001 certified environmental management systems. These include measures to reduce waste, wastewater, and emissions, as well as to manage resource and energy consumption and promote environmentally conscious behavior among employees.

PRODUCTION WITH EXCLUSIVELY RENEWABLE ENERGY

EIZO is committed to the Transition to Net Zero initiative and has operated all production facilities in Japan with 100% renewable energy since January 2024. This represents another significant step towards climate neutrality for EIZO.

SAVE ENERGY WITH EIZO MONITORS

EIZO office monitors are already highly energy-efficient. Moreover, they incorporate intelligent features to further reduce energy consumption. For instance, the Auto EcoView function ensures optimal screen brightness and can save up to 60% of energy. Additionally, each EIZO FlexScan monitor is equipped with an integrated mechanical power switch. When turned off using this switch, the monitor consumes no power at all. Even in standby mode, power consumption is capped at a maximum of 0.5 watts.

FULFILMENT OF THE LATEST SUSTAINABILITY STANDARDS

Most FlexScan monitors meet the requirements of the latest TCO Certified standard and hold an EPEAT Gold or Silver registration, ensuring compliance with stringent sustainability standards. This achievement is further reinforced by a Climate+ award, which is based on science-based climate protection standards. Additionally, EIZO monitors adhere to strict international guidelines for energy savings according to ENERGY STAR.

PARTICIPATION IN INTERNATIONAL INITIATIVES

EIZO takes a clear stance against unacceptable behaviour. That is why we participate in the United Nations Global Compact. We have also joined the Responsible Business Alliance (RBA) and are committed to continuous improvement within our global supply chain. As part of the RBA's Validated Assessment Programme (VAP) audit, our three Japanese production facilities were awarded platinum status. The rating organisation Carbon Disclosure Project (CDP) awarded EIZO the top grade of A for its outstanding commitment to climate protection in several consecutive years and repeatedly recognised it as one of the leaders in the CDP's Supplier Engagement Rating. EcoVadis, one of the world's most renowned providers of sustainability ratings, awarded EIZO a platinum rating in a single annual assessment cycle, placing it among the top 1% of over 150,000 companies assessed worldwide.

COMPLETE TRANSPARENCY

For EPEAT-registered FlexScan models, we conduct a life cycle analysis (LCA) to calculate and evaluate their environmental impact. This process involves measuring CO2 emissions generated during material procurement, production, use, and disposal. The results are documented in a comprehensive life cycle assessment report known as an Environmental Product Declaration (EPD).
